

# MSPM0 Robot Expansion Board Introduction

---

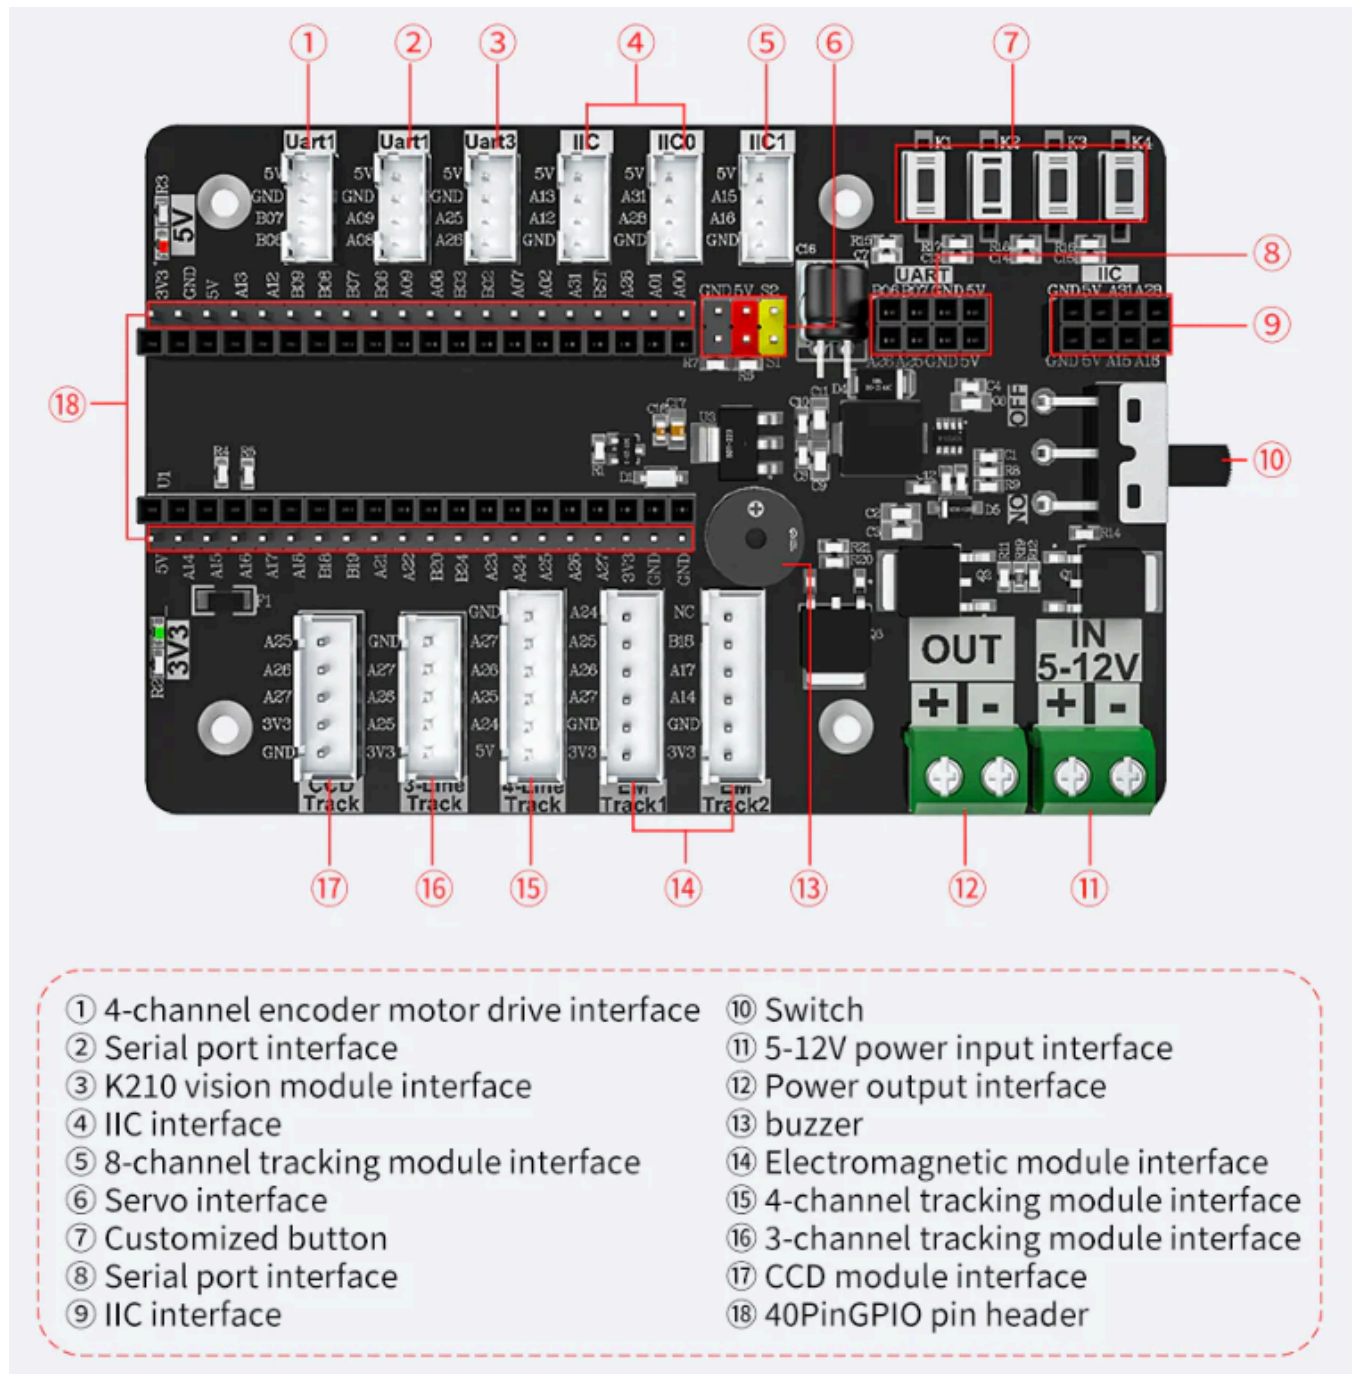

## 1. Product Introduction

---

The MSPM0 Robot Expansion Board is an expansion board specifically designed for the Yahboom MSPM0G3519 development board. When connecting, pay attention to the orientation of the MSPM0G3519 development board. Do not insert it in reverse.

This expansion board supports connection of various competition-grade accessories, exclusively for electronic design competitions. It supports 5-12V wide voltage power supply and power output. The board features a 40-pin GPIO header, buzzer, four custom buttons, and power reverse connection protection circuit. It supports DIY expansion connections. It reserved expansion interfaces for three-way line following, four-way line following, eight-way line following, CCD vision line following, and electromagnetic line following, all with anti-reverse connection interfaces. It also reserved IIC and serial expansion interfaces, supporting connection of Bluetooth 5.0 and OLED display screens, as well as two PWM servo interfaces.

## 3. Compatible Core Board

This expansion board is exclusively designed for the Yahboom MSPM0G3519 development board. If you use development boards from other brands or models, be sure to confirm whether key pins such as 5V, 3.3V, and GND are compatible with this expansion board. Otherwise, pin incompatibility may cause damage to the development board.
